

MODEL 804

Power, Performance, and Value

Vulcan's 804 provides the power and performance for light duty towing at a very affordable price. The integrated boom and wheel lift is designed to save weight, thus allowing you the potential for increased legal payload without overloading the chassis. Reliability in your towing equipment is also essential in today's competitive marketplace and the Vulcan 804 is built to meet that challenge with the same quality found in all Vulcan products.

The 804 is one of the easiest and safest units to tow with today using Vulcan's patented strapless wheel lift system. The retainers pivot horizontally as well as vertically for easy hookups in a wide variety of situations. The best part is there are no tiedown straps. Call your local Vulcan distributor to find out how the Vulcan 804 can fill your towing needs without overloading your budget.

Note: Some optional equipment may be shown. Other Vulcan Towing and Recovery Equipment is available from your local Vulcan Distributor.
